RE: GB5BW-0 R-410A Piston Change

ROUTE TO:	✓ SEEN	No. of Copies Distributed

NORDYNE is pleased to announce a running change in the GB5BW-0 Piston Wall Mount Air Handlers. Beginning in Mid October Nordyne production is converting to the utilization of an R-410A Piston; current production models utilize an R22 piston. The change was driven to allow easier field matches to R-410A Air Conditioners and Heat Pumps. AHRI ratings are available for both R22 and R-410A matches with the GB5BW-0 Wall Mount Air Handler. Additionally NORDYNE will continue to include the appropriate R22 pistons packaged with the Wall Mount Air Handlers. The change can be noted on the rating plate label and we have added pink stickers to both the coil area and carton labels to designate the R-410A piston change (Please see images below).

If you have any questions or require further assistance, please contact your RSM.
