RE: New 2-Stage Standard Furnaces

ROUTE TO:	✓ SEEN	No. of Copies Distributed

NORDYNE is pleased to announce a product upgrade to all of our 2-Stage Fixed Speed 80% AFUE furnaces. This product upgrade features a new inducer with a PSC motor replacing the previous shaded pole design. Along with this change, minor adjustments to the thermal design and pressure switches of these units were made, all designed to make the overall design more robust and less sensitive to normal variations in production and conditions in installed applications. A minor reduction in inducer noise may also be noticed with the new inducer.

NORDYNE will be replacing orders for the current SKUs with the appropriate new SKUs as defined in the tables below. Production for the new SKUs is scheduled to start the first week in February.

Updated literature will be posted on our website the week of 2/1/10. If there are any questions, please contact your NORDYNE Regional Sales Manager.
